

SafeCount Occupancy Monitoring

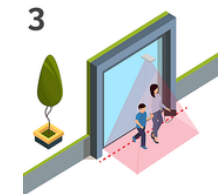

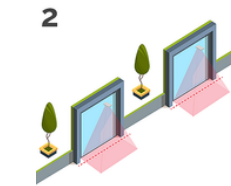

The SafeCount sensor is a customised version of our highly advanced Vector 4D people counting sensor.

Designed for accuracy and privacy, the sensor uses infrared Time of Flight technology and AI machine vision to anonymously detect and count people.

You have an option to exclude staff in count too!

The sensor is able to count large crowds of people, all moving in different directions and is unaffected by environmental conditions such as bright sunshine or shadows.

Easy Installation

Install SafeCount sensor above entrance/exit and connect cables.

Multiple Entrances

Install additional SafeCount sensors above other entrances/exits and configure basic settings.

Accuracy and Privacy

Customers and visitors are counted accurately and anonymously.

Live Data

View live occupancy data via any connected device.
